Distance band endpoint ($1/2(d_l + d_m)$), from an average case (m). See caption for details.

Legend:
- $\hat{\tau}$ point estimate & $\hat{D}$ (overlapping dist. band)
- $\hat{\tau}^*$ simulations
- ● 95% BCa CI of $\hat{D}$
- $\hat{\tau}$ point estimate & $\hat{D}$ (non−overlapping dist. band)
- $\hat{\tau}^*$ simulations
- ● 95% BCa CI of $\hat{D}$
- $\tau = 1$

y-axis: $\tau(d_l, d_m)$
